

SPECIALIZED  
**HVAC**  
SYSTEMS

## HOW ARE OUR HVAC SYSTEMS DIFFERENT?

We specialize in the design and manufacture of advanced HVAC systems for the precise control of temperature, humidity, filtration, and pressurization for equipment and processes. The three main configurations of HVAC systems we manufacture are integrated, mounted, and standalone in standard or custom solutions.

## TYPES OF HVAC SYSTEMS

### INTEGRATED HVAC

Integrated solutions are designed to fit seamlessly within existing equipment structure, allowing for a smaller size and footprint, greater system efficiency, and lower installation cost.

### MOUNTED HVAC

Environmental control units ECUs that are mounted to an existing system can be designed to meet system weight constraints, provide a reduced ECU footprint, and offer close proximity to the process.

### STANDALONE HVAC

Standalone units can be placed in the space surrounding your equipment and offer maximum flexibility in system location, installation, configuration and performance capability.

## MAJOR INDUSTRIES

Defence and Security

Hospitals and Laboratories

Telecom Sector

Life Sciences and Pharmaceutical

If you'd like to learn more about how Sabro technology can provide a workable, standard, custom, or specialized HVAC solution for your manufacturing needs, reach out to us today.
